

Date: September 30th, 2019
Time: 07:50 AM (05:50 UTC)
Event: Les Voiles de St Tropez
Team: ROWDY TOO

Synopsis: Ridge up to 1018 hPa covering from Balears to central France. Trough 1010 hPa on the Gulf of Genoa.

Gradient Wind:

Time =>	11h (09UTC)	14h (12UTC)	17h (15UTC)	20h (18UTC)
Sfc, Offshore, SE	260 20 kts	250 23 kts	260 26 kts	260 20 kts

WARNINGS: Near Gale Force gusts/periods are possible between Cap Lardier and La Fourmigue area.

Air Mass: Warm, dry, mostly stable.

Sky: Sunny.

Max. Temp. over land 29°

Air Temp: 25-27°

SST: 23°

Sea state: 1 m wind wave areas in the afternoon (1.5 m some miles offshore).

Saint Tropez/Pampelonne waters			(south of) La Fourmigue

Confidence: Average

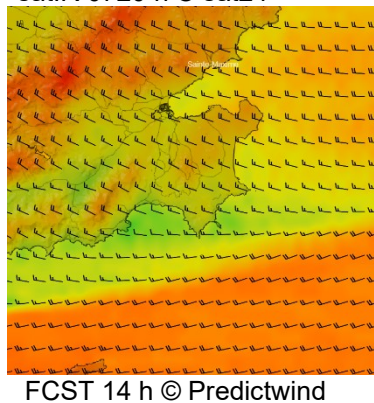

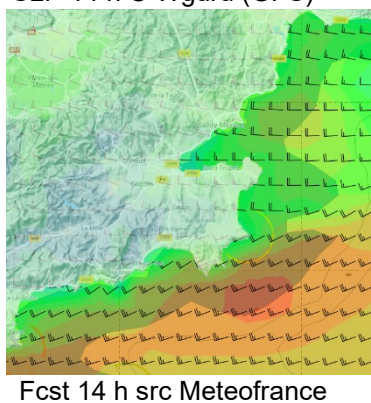

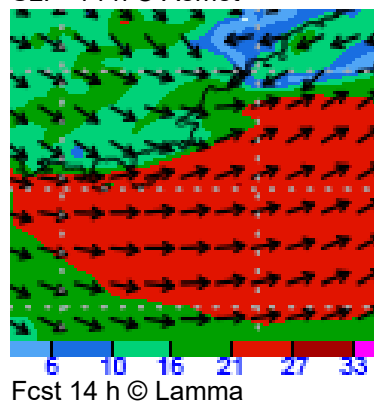

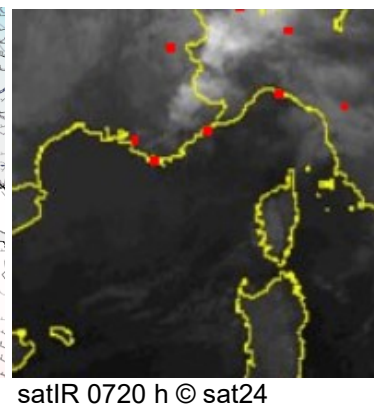

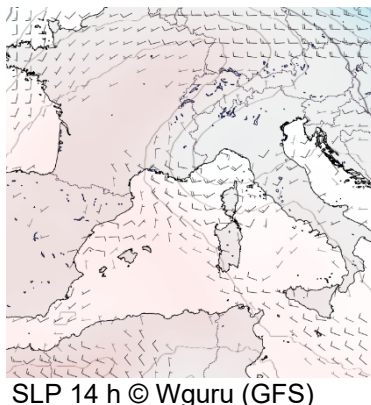

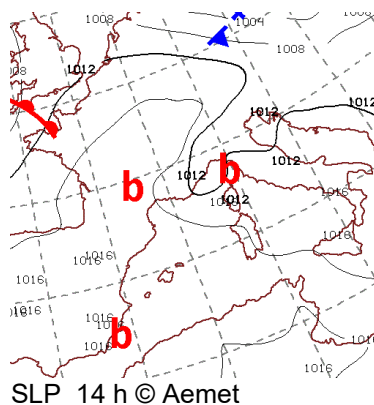

Twd Mag – Tws kts

Key Facts

- Weather pattern / Summary:** Fresh to strong Mistral all day long, convergence between the fresh W over land and the strong WSW offshore.
- Trend:** Wind at **Saint-Tropez and Pampelonne** area can have a slight diurnal trend; from 280's in the morning, backing a bit to 270° during central hours, veering a bit again by mid-afternoon, and possibly shifting sharply to NE in the end. Mean speed around 20 kts in the morning and early afternoon, easing slightly in the afternoon, then dropping when the NE breeze gets close. The strongest breeze can be located from **Cap Lardier to La Fourmigue**, Mistral bending and accelerating along the main coastline, so it can increase to 26-28 kts mean speed, with chance of Near Gale Force gusts or periods. The final shift to NE will sweep from NE to SW, so it could happen from 14-15 h at La Chretienne, around 17-18 h at ST, not moving farther West. To the East, the wind would be quite the same than at Saint-Tropez, but dropping and shifting to NE before, as said.
- Geographical Features:** General rule is Convergent pattern: more veered and weaker breeze the closer to the shore, more backed and stronger offshore. Wind

pattern between La Fourmigue and Cape Lardier would bend slightly along the coastline (240's at Cap Lardier, 250's at La Fourmigue). Weaker breeze the close to the shore, channel of strongest breeze some miles offshore (let's say between Hyeres islands and the coast and to leeward of this). Main convergence area between both patterns can be a well-defined line of different twd-tws a bit south of Cap Lardier.

4. **Clouds:** Sunny.
5. **Confidence level:** Average (6/10).
6. **TWS range:** 7-32 kts.

Next days' Outlook:

day	Winds and weather
D+1 Tue 1	Mostly sunny SE-SW sea breeze 8-15 kts.
D+2 Wed 2	Sunny Strong Mistral 25-35 kts in the morning, possibly dropping and shifting to moderate NE in the end.
D+3 Thu 3	Sunny Local Sea Breeze 6-13 kts.
D+4 Fri 4	Sunny Local Sea Breeze 6-13 kts.
