Key Facts

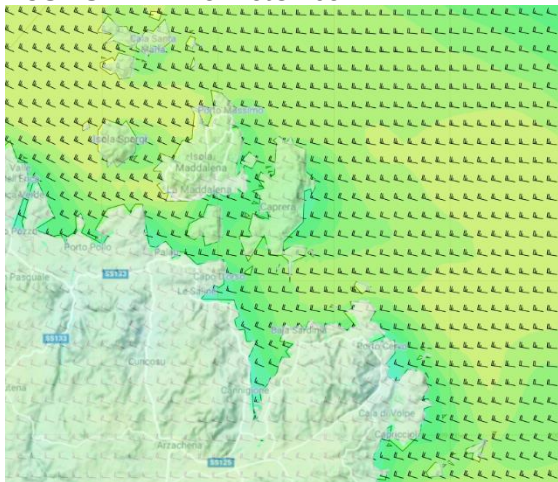

1. **Weather pattern / Summary:** Strong mistral veering and easing slightly in the afternoon.
2. **Trend:** The Mistral can weaken and veer throughout the day, easing suddenly at around 1800-1900 as the area ends up in the convergence of the WNW gradient in the strait, and a NE breeze blowing to the East of Corsica. The average wind during central hours can be 290° with 26-36 kts.
3. **Geographic Features:** The big picture is a left bend around the coast of Sardinia. Some more specific features are that the breeze will be stronger in the channels (Bomb Alley) and at Secca Tre Monti. Slightly weaker breeze in the lee of the islands and near Mortorio Archipelago.
4. **Clouds:** Mostly cloudy with some sunny intervals during the morning and central hours. Some rain clouds can cross the area in the afternoon and evening, disturbing the breeze.
5. **Confidence level:** Average (6/10).
6. **TWS range:** 24-38 kts (until 1600).
